

Your Energy Balance Results

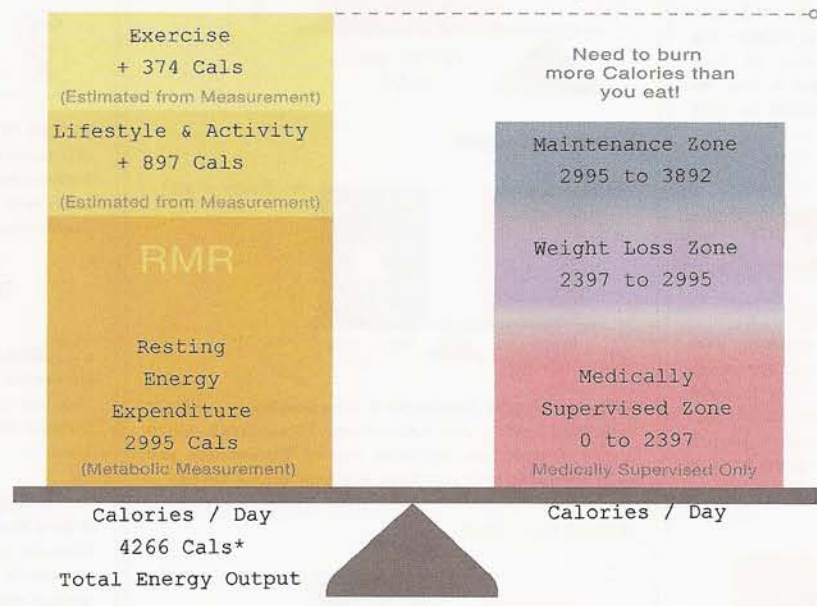

There is one basic truth to weight loss: You need to burn more than you eat. Target Metabolic Zones tell you exactly how to do that. The following results of your test show you precisely how many calories your body actually burns, and calculates how many calories you should eat to lose or maintain your weight.

What you burn How much you eat

Exercise
This is an estimate of the number of Calories you would burn with 30 minutes at a moderate exercise level.

Lifestyle & Activity
This is the number of calories you burn performing your daily activities...working, playing, eating, etc. Activity accounts for a significant portion of the calories you burn each day.

Resting Metabolic Rate
Today we measured your Metabolic Rate. This is the number of Calories your body burns everyday at rest.

Maintenance Zone
Once you reach your goal weight, this is how many calories your body needs to maintain your weight.

Weight Loss Zone
Comfortable weight loss comes from eating slightly less Calories than your body needs. By eating healthy foods throughout the day you should not feel hungry.

Medically Supervised Zone
Very low calorie diets should only be done under medical supervision. Supervision is required to ensure adequate nutrition, and to monitor and treat the potential slowing of metabolic rate.

*Total = RMR + Lifestyle + Exercise

 Time to reach your goal weight... 7 weeks
If you add exercise..... 6 weeks
*Based on measured metabolic rate, assumes a moderate level for 30 minutes a day

FAST Metabolism: People with "FAST" metabolic rates burn MORE calories than normal.
CAUTION: If you just recently exercised, ate a large meal, or were not in a restful state during the test, you may want to repeat the test (ask about correct test preparation).

SLOW Metabolism: People with "SLOW" metabolic rates burn FEWER calories than normal.
CAUTION: If you think you may not have sealed your nose or mouth during the test, you should repeat the test. You want to ensure your measured Caloric Zones are correct.

*note: NORMAL is considered to be +/- 10% the predicted value.

Coach's Interpretation

Target daily calories:
